

¹ Developed by TFT, Greenpeace, Golden Agri-Resources and industry partners, High Carbon Stock is a term to describe primary forests, high, medium and low-density forests and regenerating forests. Greenpeace, TFT and industry partners are now trailing a HCS framework and identification tool for use in different forests around the world. For more information, click [here](#).

¹ High conservation value (HCV) areas are those that contain items of biological, social or cultural value that it is important to conserve, including rare, threatened and endangered species and their habitat. Please visit the [HCV Network website](#) for more information.
